

HABIBCORE

COPY & CONTENT SYSTEM

2026 / 29 ROUTES / REWRITTEN FROM THE CURRENT SITE

The job: make the site sound like the person behind the work.

Source audited: habibcore.com, current public site, September 2026.

This document is an implementation-ready copy deck: page headlines, subheads, section copy, CTAs, microcopy, case-study framing, and voice rules. Facts are retained from the current site; the writing is intentionally less agency-like, more personal, more specific, and more direct.

Voice direction

GLOBAL

The current copy is accurate, but it often reads like a very good technical agency wrote it. HABIBCORE needs to sound like the person who actually made the things.

What is wrong with the current voice

- Too many sentences explain the philosophy before the work has had a chance to speak.
- Repeated structures make different capabilities sound like one reusable service template.
- The writing overuses words like proof, shipped, production, system, handoff and answerable. These are useful ideas, but repetition turns them into branding.
- The strongest facts are there, but the personality is often one layer too far removed from them.
- The music history is treated as a footnote when it is actually part of the explanation for the visual taste.

The new voice

- First person. Say I, not the practice, when the work was actually done by one person.
- Specific before polished. Name the tool, the constraint, the weird detail, the thing that broke, the thing that mattered.
- Blunt, but not performative. A sharp sentence is better than five sentences of positioning.
- Technical when technicality proves something. Never use technical language as decoration.
- Personal without turning the portfolio into a diary.
- A little dry humour and friction are welcome. Generic creative-agency enthusiasm is not.
- Let music, Lagos, operations, design and software coexist. The unusual combination is the story.

CORE VOICE LINE

I make things. Then I make them work.

POSITIONING ANCHOR

I design it. I build it. I answer for it.

SECONDARY LINE

I came into this through music and design. I stayed long enough to end up building software and fixing operations.

Global microcopy

SYSTEM

Small wording changes will do as much for the voice as the big headlines.

These are not banned words. They simply stop carrying the whole site. Keep them where the sentence earns them.

Home

/

The homepage should feel like meeting Habib, seeing the work, then deciding whether you want to go deeper.

HERO HEADLINE

I design it. I build it. I answer for it.

HERO SUPPORT

Brand, product, software, AI and the systems behind them. I move between disciplines because real problems rarely stay in one. Based in Lagos. Working wherever the work is.

PRIMARY CTA

SEE THE WORK

SECONDARY CTA

START A PROJECT

Intro before work

I started in music and visual design. Then I spent years inside financial-services operations, where a beautiful idea is useless if nobody can actually run it. Somewhere between the two, I started building software. Now I design the thing, build the thing and stay around when the thing starts doing real work.

Selected work heading

Things I actually made.

Selected work intro

A few recent builds. The full archive is much bigger.

Capability bridge

I do not separate design from building because the work does not. Identity can become interface. Interface can become software. Software can become an operation. Sometimes the project starts with a poster and ends with a database.

CAPABILITY CTA

SEE WHAT I CAN DO

Approach bridge

I do not have a 23-step methodology deck. Most projects need the same thing: see the real problem, give it structure, make the thing, put it in front of someone, and stay long enough to see what breaks.

APPROACH CTA

SEE HOW I WORK

HOME CLOSING

Have an idea, a problem, or something that should exist but does not yet? Bring the rough version.

HOME CLOSING CTA

START A PROJECT

Work

/work

This page should finally give the portfolio room to breathe. It is the archive, not another homepage section.

HERO HEADLINE

A lot more than six projects.

HERO SUPPORT

The homepage shows you what I am doing now. This is the longer trail: brands, products, software, systems, graphics, music and the experiments in between.

Index intro

Some of these were commissioned. Some were self-initiated. Some started as design work and became software. Some started as songs. They all stay here because they explain how the practice got built.

Filter language

- ALL

- NOW - current and recent work
- CLIENT - commissioned work
- PRODUCT - things I built for use
- BEFORE THE SOFTWARE - the music and design archive

PROJECT CARD CTA

VIEW CASE

END CTA

THERE IS MORE ->

Capabilities

/capabilities

Do not present eight services like an agency menu. Present them as eight ways the same brain gets useful.

HERO HEADLINE

Eight disciplines. One very specific habit: make the thing real.

HERO SUPPORT

Brand, product, software, AI, automation, creative direction, graphic design and training. The labels are different. The operating principle is not.

Capability intro

I do not believe design, code and systems need to live in separate boxes. Sometimes the best solution is a brand system. Sometimes it is a database constraint. Sometimes it is a better sentence. The job is figuring out which one actually fixes the problem.

INDEX CTA

BROWSE THE CAPABILITIES

Brand Identity

/capabilities/brand-identity

A brand needs to work after the launch deck is closed: on screens, in documents, in social posts, in products and in the hands of people who were not in the room when it was made.

HERO HEADLINE

I do not really do logos. I build the thing the logo has to survive.

Why this matters

I came into this through graphic design and art direction, then learned what happens when an identity meets a real organisation. That is why I care about the boring parts: rules, voice, usage, templates, hierarchy, the stuff that keeps the thing recognisable six months later.

What I actually do

- Brand identity systems
- Visual direction
- Brand voice and copy frameworks
- Guidelines and production systems
- Social and campaign systems

Relevant proof

Leadway Pensure is the clearest example: an unprompted brand extension pitch built from four years of operational context, then expanded into commissioned work.

Questions worth answering on this page

- Can you build on an existing identity?
- What do you deliver beyond the mark?
- Can the system be used by an internal team without me?

CLOSING CTA

BRING THE BRAND PROBLEM

Product Design

/capabilities/product-design

I design interfaces with the build in the room. That changes what gets designed: states, edge cases, data, empty screens, errors, the things that usually appear after the handoff.

HERO HEADLINE

If the interface cannot survive contact with a real user, I have not finished designing it.

Why this matters

The goal is not a beautiful prototype. It is a product whose decisions survive production.

What I actually do

- Product interfaces and flows
- Web apps and internal tools
- Conversational UX
- Design systems and component logic
- Information architecture

Relevant proof

Biscuit AI, Chef4Me, Relay and the Olumayowa site show the range from conversation-first products to operational software and high-clarity public sites.

Questions worth answering on this page

- Do you design from research, constraints or both?
- Will you work directly in code?
- What happens after the first version ships?

CLOSING CTA

BRING THE INTERFACE PROBLEM

Software

/capabilities/software

I write the software behind the interface: web apps, chat products, internal portals, data flows, deployment and the unglamorous code that keeps the thing alive.

HERO HEADLINE

At some point the mockup has to stop being a picture.

Why this matters

I care about the part portfolios usually hide: what happens when the user does the wrong thing, the network fails, the data is ugly, or somebody needs to maintain the code six months later.

What I actually do

- Production web apps
- Telegram and chat products
- Internal tools and portals
- API and model integrations
- Deployment and operational support

Relevant proof

Relay is the cleanest example: an operations rebuild with role-scoped access, database-level audit enforcement, working-days SLA clocks and a CRS calculator.

Questions worth answering on this page

- Can you take over an existing codebase?
- Do you handle deployment as well as code?
- How do you decide what belongs in the first release?

CLOSING CTA

BRING THE THING THAT HAS TO RUN

AI Systems

/capabilities/ai-systems

Not every product needs an assistant. Not every assistant needs to remember everything. The useful question is what the model should actually do, what the user should be able to inspect, and what happens when the model is wrong.

HERO HEADLINE

I am interested in AI when it earns the right to be in the workflow.

Why this matters

The work here is practical: assistants, model routing, search, memory, evaluation, cost visibility and the training that makes AI useful after the demo ends.

What I actually do

- AI assistants
- Model and tool integration
- Memory systems
- AI evaluation
- AI literacy and training

Relevant proof

Biscuit AI and Chef4Me are live product examples. The workplace programme extends the same thinking into teams.

Questions worth answering on this page

- Where should AI actually sit in our workflow?
- How do you handle model cost and reliability?
- Can you train the team alongside the build?

CLOSING CTA

BRING THE WORKFLOW

Automation

/capabilities/automation

Four years inside financial-services operations taught me the difference between a process diagram and the process people actually use.

HERO HEADLINE

I do not automate things I have not understood.

Why this matters

The right automation starts with the real workflow, the weird exceptions, the handoffs, the audit trail and the Friday afternoon behaviour. Then software carries what is worth keeping.

What I actually do

- Workflow automation
- CRM and pipeline systems
- Process documentation
- Audit trails and data hygiene

Relevant proof

10,000+ end-clients were moved to self-service channels; the live pipeline work spans 18 stages and 250+ clients.

Questions worth answering on this page

- What happens before you automate a workflow?
- Can you work with tools we already use?
- How do you keep automation understandable after launch?

CLOSING CTA

BRING THE PROCESS

Creative Direction

/capabilities/creative-direction

Creative direction here is not moodboarding for the sake of moodboarding. It is deciding what the work should feel like, then making the visual, motion and release materials agree.

HERO HEADLINE

This started with music. The image has to sound like the record.

Why this matters

Music trained the instinct: cover, image, video, rollout and sound need to belong to the same world.

What I actually do

- Art direction
- Campaign visuals
- Film and promo work
- Music release direction
- Visual systems for brands and artists

Relevant proof

The archive includes two EP releases, cover-art systems, artist EPKs and the Leadway Customer Service Week film.

Questions worth answering on this page

- Can the work cover strategy and execution?
- Do you handle motion and sound as well as stills?
- Can you direct an existing team rather than produce everything yourself?

CLOSING CTA

BRING THE IDEA

Graphic Design

/capabilities/graphic-design

Graphic design is still the base layer underneath everything: type, composition, rhythm, hierarchy, image and the ability to make information feel inevitable.

HERO HEADLINE

I still trust the grid. I just do not worship it.

Why this matters

The work ranges from cover art and cassette packaging to pitch decks, lyric visuals and training material. Different outputs, same craft.

What I actually do

- Cover art and packaging
- Editorial and decks
- Promo and lyric visuals
- Composition and information design

Relevant proof

The BlvckOreo cover series, Bedroom Recordings II and The Basics of Graphic Design make that range visible.

Questions worth answering on this page

- Can you handle print as well as digital?
- Do you work from an existing brand system?
- What makes a layout feel finished?

CLOSING CTA

BRING THE MESSAGE

Training

/capabilities/training

I build training like products: clear structure, useful pacing, things people can practise, and material that still exists after the session ends.

HERO HEADLINE

Teach it well enough that you are not needed for the next step.

Why this matters

The goal is not to sound clever in a room. It is to leave people with a working vocabulary and something they can use tomorrow.

What I actually do

- AI literacy programmes
- Curriculum design
- Facilitation
- Training decks and learning hubs

Relevant proof

AI in the Workplace is an 11-module, 90-minute programme with its own web hub, slides and flashcards. The Basics of Graphic Design teaches the craft itself.

Questions worth answering on this page

- Who is the training for?
- Do you build the curriculum and the learning materials?
- Does the material stay available after the session?

CLOSING CTA

BRING THE TEAM

Approach

/approach

This should read like a person explaining how they work, not a consultancy selling a methodology.

HERO HEADLINE

I do not have a 23-step process.

HERO SUPPORT

Most projects do not need one. They need the real problem, a clear structure, a good build, a user who can actually use it, and someone who is still around when something breaks.

01 - Find the real problem

Start with what is actually happening, not the polished version in the brief. What is broken? Who feels it? What does it currently cost? What would "done" change?

02 - Make the thing make sense

Before pixels and code, I work out the structure: the story, the interface, the information, the workflow, the system behind the surface.

03 - Build the ugly parts too

Errors. Empty states. Data. Permissions. Content. The bits nobody puts in the hero shot. If those are not designed, the product is not designed yet.

04 - Put it in someone's hands

A prototype tells me what I think. A real user tells me what I missed. The fastest way to validate a design is usually to get it into production.

05 - Stay long enough to learn

Launch is not the finish line. The useful part is seeing what real use does to the thing and fixing what the first version could not know.

OPERATING PRINCIPLE

The work is finished when it works, not when it looks finished.

Case-study spine

- BRIEF - what is broken and what done means
- SYSTEM - the structure underneath
- BUILD - how it became real
- PROOF - what shipped and what changed
- OPERATE - what happens after launch

CTA

SEE THE WORK

About

/about

This page should explain the unlikely combination without turning it into a corporate origin story.

HERO HEADLINE

How I got here is slightly inconvenient for neat portfolios.

HERO SUPPORT

I started in music and visual design. Then I spent years inside financial-services operations. Then software became part of the job. Now HABIBCORE sits in the middle of all three.

The story

Music was the first place I learned that taste is not decoration. A cover changes how a record feels before the first track starts. A rollout either belongs together or it does not. That became graphic design, art direction and brand work.

Then operations

Four years inside a financial-services organisation changed the way I think. I saw what happens when processes are real: people skip steps, spreadsheets become infrastructure, the same questions appear every day, and the difference between a good idea and a usable one gets expensive very quickly.

Then software

Eventually I stopped waiting for someone else to build the thing. I started writing it. First as tools and automations, then as products, assistants, portals and the systems underneath them.

Now

Today I work across brand, product, software, AI, automation, creative direction, graphic design and training. That sounds like a lot until you look at the common thread: I like figuring out how a thing should work, then getting close enough to it to make it real.

PERSONAL LINE

I learned taste in music. I learned systems in operations. I learned patience in software.

Base

- Lagos, Nigeria
- Working globally
- Independent practice
- Available for select projects

CTA

START A PROJECT

Contact

/contact

Make this page feel like a conversation with the person who will actually do the work.

HERO HEADLINE

Bring me the problem before you polish the brief.

SUPPORT

Tell me what is broken, what you are trying to make, or what should exist but does not yet. The rough version is fine. We can make it clearer together.

What are you building?

- BRAND IDENTITY
- WEBSITE / APP
- DESIGN SYSTEM
- AI / AUTOMATION
- PRODUCT / SOFTWARE
- CREATIVE / CAMPAIGN
- TRAINING
- SOMETHING ELSE

Better form questions

- What needs to exist?
- What is currently broken?
- What should it do when we are done?
- Your name
- Email
- Anything else I should know?

Contact options

- EMAIL
- WHATSAPP
- GITHUB
- BEHANCE
- LINKEDIN

PRIMARY CTA

SEND THE PROBLEM

RESPONSE LINE

Usually respond within 24h.

CLOSING LINE

No agency maze. Just the person you are talking to.

Biscuit AI

/work/biscuit-ai

AI / PRODUCT. Deepen the story; do not turn it into a template.

HERO HEADLINE

I built a Telegram assistant that can tell you what it remembers.

HERO SUPPORT

Most assistants either forget everything useful or remember everything with no way to inspect it. Biscuit treats memory as part of the interface, not a hidden backend trick.

Context

The brief was simple: make an assistant I would actually want to use. That meant inspectable memory, the ability to erase it, web search, a local book library, image generation and visible costs - all inside one conversation.

What I did

Production-ready Telegram assistant built with Python, OpenRouter, Tavily, layered memory, local library, image generation and cost visibility.

Result / proof

Production-ready and in daily use. The important part is not that it can chat. It is that the useful parts are inspectable.

Questions worth keeping on the live page

- What is inspectable memory?
- Why make cost visible inside the conversation?
- Why Telegram instead of a separate app?

Editorial rule

Write in first person where the action was mine. Keep the technical detail that proves the decision. Cut filler praise. Let the screenshots, links, outputs and outcomes do the convincing.

CLOSING CTA

SEE THE NEXT THING

Chef4Me

/work/chef4me

CONSUMER / AI. Deepen the story; do not turn it into a template.

HERO HEADLINE

Dinner starts with what is already in the kitchen.

HERO SUPPORT

Recipe apps start with a dish and work backwards to shopping. Real kitchens are messier. Chef4Me starts with what is actually there.

Context

The assistant tracks ingredients and expiry dates, then suggests meals from 40+ cuisines through plain Telegram commands. No forms. No dashboard. The interface is the conversation.

What I did

Telegram assistant, inventory model, expiry tracking, Gemini suggestion engine and conversational UX.

Result / proof

The whole product is a chat, which means updating the inventory costs roughly one sentence.

Questions worth keeping on the live page

- Why start from inventory instead of recipes?
- How does conversational input reduce friction?
- What does the 40+ cuisine layer actually change?

Editorial rule

Write in first person where the action was mine. Keep the technical detail that proves the decision. Cut filler praise. Let the screenshots, links, outputs and outcomes do the convincing.

CLOSING CTA

SEE THE NEXT THING

Leadway Pensure

/work/leadway-pensure

BRAND / SYSTEMS. Deepen the story; do not turn it into a template.

HERO HEADLINE

I did not wait for the brief.

HERO SUPPORT

I had four years of operational context inside the organisation. I could see where the brand, product and communication system were leaving value on the table. So I built the argument before anyone asked me to.

Context

The result was a live web-document pitch covering identity guidelines, product redesigns, social systems and brand voice. Leadway later commissioned the Customer Service Week 2024 film as a follow-on engagement.

What I did

Brand extension pitch, identity guidelines, product redesign concepts, social system, brand voice, live web document, commissioned film.

Result / proof

The unusual part is the starting point: self-initiated work grounded in inside knowledge rather than an external audit from a distance.

Questions worth keeping on the live page

- Why was the pitch self-initiated?
- What did four years inside operations change?
- What happened after the pitch?

Editorial rule

Write in first person where the action was mine. Keep the technical detail that proves the decision. Cut filler praise. Let the screenshots, links, outputs and outcomes do the convincing.

CLOSING CTA

SEE THE NEXT THING

Olumayowa Nursing Home

/work/olumayowa-nursing-home

CLIENT / WEB. Deepen the story; do not turn it into a template.

HERO HEADLINE

A healthcare site built for the moment when someone is already worried.

HERO SUPPORT

A local practice needed a site that could answer the important questions quickly: what do you do, are you credible, can I reach you?

Context

Six services, licensing credentials and every contact route are arranged for a fast scan. The site had to work on the devices and networks a local patient would actually use, not an imaginary broadband connection.

What I did

Web design, development, information architecture and licensing/credentials presentation.

Result / proof

Designed, built and shipped end to end. The result is deliberately simple: see the service, see the proof, know how to reach the practice.

Questions worth keeping on the live page

- What information had to be found immediately?
- Why was one-page architecture appropriate?
- How did local device and network constraints affect the build?

Editorial rule

Write in first person where the action was mine. Keep the technical detail that proves the decision. Cut filler praise. Let the screenshots, links, outputs and outcomes do the convincing.

CLOSING CTA

SEE THE NEXT THING

AI in the Workplace

/work/ai-in-the-workplace

OPS / TRAINING. Deepen the story; do not turn it into a template.

HERO HEADLINE

AI training that still exists after the trainer leaves.

HERO SUPPORT

One session is easy to deliver. It is harder to make the material useful a week later.

Context

I built an 11-module, 90-minute company-wide programme for Birdview, then built the web hub that carried the curriculum, slides and flashcards on one link.

What I did

Curriculum design, facilitated session, web hub, slide deck and flashcard revision set.

Result / proof

The training became a reference point instead of a one-off event.

Questions worth keeping on the live page

- Why eleven modules?
- What makes the web hub necessary?
- How do you keep training useful after the session?

Editorial rule

Write in first person where the action was mine. Keep the technical detail that proves the decision. Cut filler praise. Let the screenshots, links, outputs and outcomes do the convincing.

CLOSING CTA

SEE THE NEXT THING

Relay

/work/relay

PRODUCT / SYSTEMS. Deepen the story; do not turn it into a template.

HERO HEADLINE

Make compliance impossible to forget.

HERO SUPPORT

The operation needed more than another dashboard. It needed the system itself to enforce the rules: permissions, auditability and deadlines.

Context

Relay was rebuilt as an operations portal with role-scoped access, an append-only audit trail at the database level, working-days SLA clocks and a CRS calculator in the browser.

What I did

Next.js portal, RBAC, database-level audit trail, SLA clocks and CRS calculator.

Result / proof

The important design decision sits low in the stack: if compliance matters, the database should help enforce it.

Questions worth keeping on the live page

- Why enforce auditability in the database?
- How are SLA clocks calculated?
- What did the operations rebuild replace?

Editorial rule

Write in first person where the action was mine. Keep the technical detail that proves the decision. Cut filler praise. Let the screenshots, links, outputs and outcomes do the convincing.

CLOSING CTA

SEE THE NEXT THING

Skaame

/work/skaame

CREATIVE / EPK. Deepen the story; do not turn it into a template.

HERO HEADLINE

An EPK that feels like the artist, not a resume with pictures.

HERO SUPPORT

A press kit has to carry more than facts. It needs to carry tone.

Context

Built the artist web EPK for Skaame and cut the promo film to the music instead of a generic edit template.

What I did

Artist web EPK, promo film, creative direction and image.

Result / proof

Signed off as work that actually delivered the feeling the artist wanted.

Questions worth keeping on the live page

- What makes an EPK feel like the artist?
- How was the promo film cut?
- Where did the creative direction happen?

Editorial rule

Write in first person where the action was mine. Keep the technical detail that proves the decision. Cut filler praise. Let the screenshots, links, outputs and outcomes do the convincing.

CLOSING CTA

SEE THE NEXT THING

Layo Isaac

/work/layo-isaac

CREATIVE / EPK. Deepen the story; do not turn it into a template.

HERO HEADLINE

Twelve pages. One job: get the booking.

HERO SUPPORT

The EPK had to be scannable without becoming bland. Image, story and credentials had to land quickly.

Context

Built a 12-page press-ready artist EPK designed around the decision a promoter actually needs to make.

What I did

Artist EPK, press materials and image direction.

Result / proof

The page count is not the achievement. The clarity is.

Questions worth keeping on the live page

- Why twelve pages?
- What does a promoter need to know first?
- How did you keep the EPK from feeling generic?

Editorial rule

Write in first person where the action was mine. Keep the technical detail that proves the decision. Cut filler praise. Let the screenshots, links, outputs and outcomes do the convincing.

CLOSING CTA

SEE THE NEXT THING

BlvckOreo

/work/blvckoreo

CREATIVE / BRAND. Deepen the story; do not turn it into a template.

HERO HEADLINE

Before HABIBCORE had a stack, it had songs.

HERO SUPPORT

BlvckOreo is part of the foundation of the practice: music, writing, image, identity and the discipline of putting work into the world.

Context

Self-directed personal brand and EPK work, including the BO dice mark, music production and release work.

What I did

Personal brand, EPK, mark system, music production and release work.

Result / proof

This is where the visual instinct started becoming a practice.

Questions worth keeping on the live page

- How did music shape the design practice?
- What was self-directed about the project?
- Where does this work sit in the HABIBCORE story?

Editorial rule

Write in first person where the action was mine. Keep the technical detail that proves the decision. Cut filler praise. Let the screenshots, links, outputs and outcomes do the convincing.

CLOSING CTA

SEE THE NEXT THING

1ETHFP

/work/1ethfp

CREATIVE / WEB3. Deepen the story; do not turn it into a template.

HERO HEADLINE

When internet culture becomes design material.

HERO SUPPORT

1ETHFP was creative collaboration in a space where community, roadmap and release rhythm were part of the product.

Context

The work lived between culture, community and design rather than inside a traditional brand brief.

What I did

Creative collaboration, community and release rhythm, phase-two roadmap material.

Result / proof

An early example of treating digital culture as material, not as a trend label.

Questions worth keeping on the live page

- What was the creative problem?
- How did community and release rhythm affect the work?
- Why treat internet culture as material?

Editorial rule

Write in first person where the action was mine. Keep the technical detail that proves the decision. Cut filler praise. Let the screenshots, links, outputs and outcomes do the convincing.

CLOSING CTA

SEE THE NEXT THING

Bedroom Recordings II

/work/bedroom-recordings-ii

CREATIVE / GRAPHIC DESIGN. Deepen the story; do not turn it into a template.

HERO HEADLINE

A record release made like a physical thing.

HERO SUPPORT

Bedroom Recordings II was made with YE!!OWSOUL. I co-produced the record, led the creative and designed the physical release.

Context

The cassette cover carries the mood. The tracklist carries the sequence. The release is treated as an object, not just an upload.

What I did

EP co-production, cassette cover, tracklist and independent release.

Result / proof

The EP still streams from the HABIBCORE sound system - the release remains part of the site, not just its archive.

Questions worth keeping on the live page

- What was your role in the record itself?
- Why a cassette package?
- How does the sound system relate to the release?

Editorial rule

Write in first person where the action was mine. Keep the technical detail that proves the decision. Cut filler praise. Let the screenshots, links, outputs and outcomes do the convincing.

CLOSING CTA

SEE THE NEXT THING

Singles & Cover Art

/work/singles-cover-art

CREATIVE / GRAPHIC DESIGN. Deepen the story; do not turn it into a template.

HERO HEADLINE

Every single got its own world.

HERO SUPPORT

Return of the Dead, Vpn Visa, Show Me and EPP ME!!! were treated as four records, not one repeated template.

Context

The cover series gives each track its own image language while keeping the artist world coherent.

What I did

Single cover artwork, art direction, image and wider Behance archive.

Result / proof

Series thinking is the point: each release adds to the world instead of restarting it.

Questions worth keeping on the live page

- Why a series instead of isolated covers?
- How does each cover remain distinct?
- Where does the wider archive live?

Editorial rule

Write in first person where the action was mine. Keep the technical detail that proves the decision. Cut filler praise. Let the screenshots, links, outputs and outcomes do the convincing.

CLOSING CTA

SEE THE NEXT THING

Visitor from Mars

/work/visitor-from-mars

CREATIVE / MUSIC. Deepen the story; do not turn it into a template.

HERO HEADLINE

An entire tape had to look like it sounded.

HERO SUPPORT

Visitor from Mars was the Alien Inc x Blvck Oreo tape, co-produced with The Beatoven.

Context

I held the creative lead, directed the visual world and co-produced the record. The cover and release materials had to belong to the same universe as the music.

What I did

Co-production, creative direction, cover artwork and independent release.

Result / proof

An early example of the work becoming both the thing and the world around the thing.

Questions worth keeping on the live page

- What did creative lead mean here?
- How did co-production affect the visual world?
- What made the release feel like one universe?

Editorial rule

Write in first person where the action was mine. Keep the technical detail that proves the decision. Cut filler praise. Let the screenshots, links, outputs and outcomes do the convincing.

CLOSING CTA

SEE THE NEXT THING

Gen.Sadiq - Madonna

/work/gen-sadiq

CREATIVE / GRAPHIC DESIGN. Deepen the story; do not turn it into a template.

HERO HEADLINE

The song came first. The visuals had to catch up.

HERO SUPPORT

Gen.Sadiq came for the full visual package for Madonna: cover, promo film and lyric video.

Context

The cover was built from the song itself, then the motion pieces were cut to the beat. The package was signed off in the first round.

What I did

Single cover, beat-locked promo film and lyric promo video.

Result / proof

"He heard the song once and came back with a cover that looks exactly how it sounds." - Gen.Sadiq

Questions worth keeping on the live page

- Why start from the song?
- How were the videos beat-locked?
- What did first-round sign-off tell you about the fit?

Editorial rule

Write in first person where the action was mine. Keep the technical detail that proves the decision. Cut filler praise. Let the screenshots, links, outputs and outcomes do the convincing.

CLOSING CTA

SEE THE NEXT THING

The Basics of Graphic Design

/work/tbogd

TRAINING / CURRICULUM. Deepen the story; do not turn it into a template.

HERO HEADLINE

Teach the thing by designing the thing.

HERO SUPPORT

This was a fundamentals course built from scratch: curriculum, deck and facilitation material.

Context

The training itself uses the principles it teaches - grid, type, hierarchy, composition - so the material is not just information about design. It is designed to demonstrate it.

What I did

Curriculum, training deck, facilitation material and end-to-end production.

Result / proof

Ten sections that treat design fundamentals as a usable system rather than a slide dump.

Questions worth keeping on the live page

- Why teach design fundamentals as a designed product?
- What does the 10-section structure cover?
- How do you make a deck teach rather than simply present?

Editorial rule

Write in first person where the action was mine. Keep the technical detail that proves the decision. Cut filler praise. Let the screenshots, links, outputs and outcomes do the convincing.

Implementation prompt

FOR THE DEVELOPER / CODING AGENT

This is the instruction to use when applying the copy to the current website.

ROLE

You are a senior UX writer, content designer and frontend engineer. Update the existing HABIBCORE site in place using the approved content in this document. Do not redesign the visual identity. Do not create a new portfolio. Preserve the current architecture and interaction language while replacing the copy and expanding the page system where the current routes already exist.

TASK

- Replace generic or agency-sounding copy with the page-specific copy in this document.
- Preserve factual claims and only change wording where this document supplies a revised formulation.
- Keep the first-person voice throughout. Do not turn HABIBCORE into a corporate "we" brand.
- Do not repeat the same headline pattern across capability pages. Each capability needs its own reason to exist.
- Do not add fake testimonials, metrics, clients, projects or outcomes.
- Keep the homepage focused. The expanded work history belongs on /work and individual case routes.
- Keep capability pages useful and evidence-led. Every capability should point to real work.
- Do not overuse the terms "shipped", "proof", "system", "handoff" or "one pair of hands". Use them when they carry meaning, not as branding filler.
- Preserve all existing imagery, links, forms, music functionality and working interactions.
- Audit every route after implementation for missing text, broken links, repeated copy and factual drift.

QUALITY TEST

Read the site aloud. If a paragraph sounds like it could have been written for any design agency, rewrite it. If a claim cannot be backed by an existing project or documented experience, remove it. If a sentence is clever but says nothing, remove it. The finished site should feel like the same person who built Biscuit AI, worked inside operations, made records, designed brands and shipped software - not a copywriter describing that person from a distance.

FINAL TEST

Does this sound like Habib, or does it sound like a portfolio trying to sound impressive?
